

## L 15

### Classic in Design and Quality

A spot of old-fashioned elegance at a fair price. The new L 15 now gives anyone with a preference for a classic look the opportunity to benefit from cutting-edge sensor technology for very little money.

The traditional design and quality of this intelligent light is underscored by the hint of bevelled glass. The light is equipped with the brand leader's sensor technology that's been tried and tested in millions of applications. It has a detection angle of 180° and max. reach of 10 m. The sensor's generous tilting range (90°) and the ability to close off individual segments permit optimum adjustment of the detection range to the given situation.
